See our Service Department for more details.

THE NEW TWIN CAM 96™ ENGINE

More torque, more rumble, and perfectly matched to the new 6-speed transmission on all 2007 Dyna™, Softail® and Touring models. The 96 cubic inch engine retains the traditional V-twin look while boosting displacement by 9% to 1584cc. Peak torque is increased by 17% delivering more performance. Maintenance intervals are increased to 10,000 miles for the primary oil change and 20,000 miles for the transmission oil change. The 6-Speed Cruise Drive ™ transmission offers lower cruising rpm in top gear for a smoother, more relaxed ride at highway speeds. The gear ratios are optimized to match the output of the new Twin Cam 96™ engine. Clutch lever effort is further reduced with the use of a new high-efficiency clutch cable on Touring and Softail® models.
